Application No.: 10/565,798 Amendment under 37 C.F.R. §1.111
Art Unit: 3617 Attorney Docket No.: 052895

AMENDMENTS TO THE SPECIFICAITON

Please amend the paragraph beginning on page 10, line 317 as follows:

Fig. 2 illustrates a transverse section of the two separate bodies of displaced water 29

which are created by the slotted hull of Fig. 1. The two created COB's 21 may be laterally

distanced from each other. This separation of the supporting water into two separate and distinct

COB's 21 induces into the hull commensurate separation of the boat weight into two separate

Centres of Gravity also laterally distanced from each other. The combined effect of these

separations is to generate two virtual "feet" on which the hull "stands in the water. There is some

similarity in this effect to the principle of the catamaran which employs two separate and distinct

hulls to generate two separate and laterally distanced centres-of-buoyancy. The boat of this

invention however generates in similar effect within the envelope of a single unit-body hull (e.g.,

a single hull unit).
